Focaccia

A valid ticket.
But who is holding it?

I enjoy building useful things
You cannot replace your face
Can we check the person while keeping less face data?

Too broad

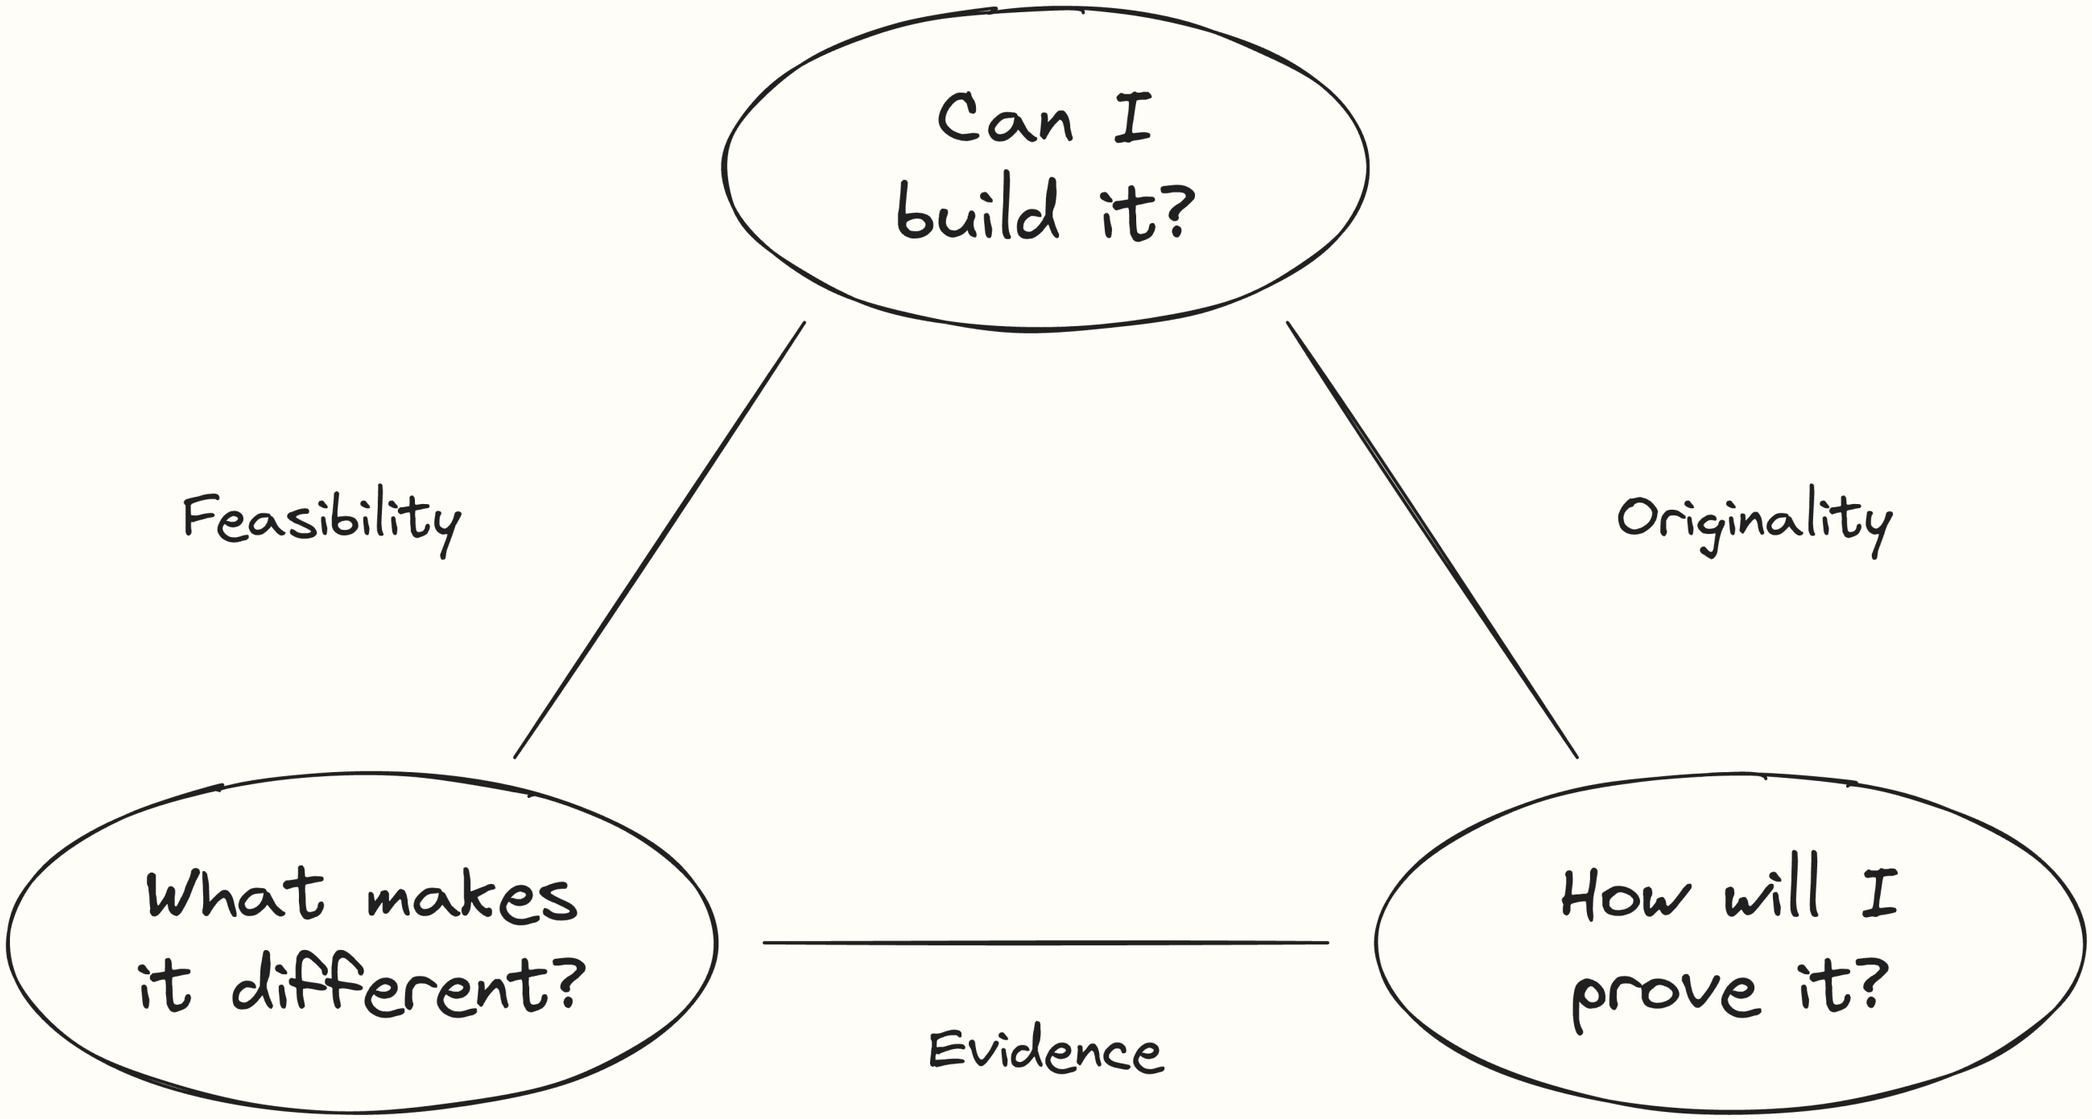

A commercial event platform

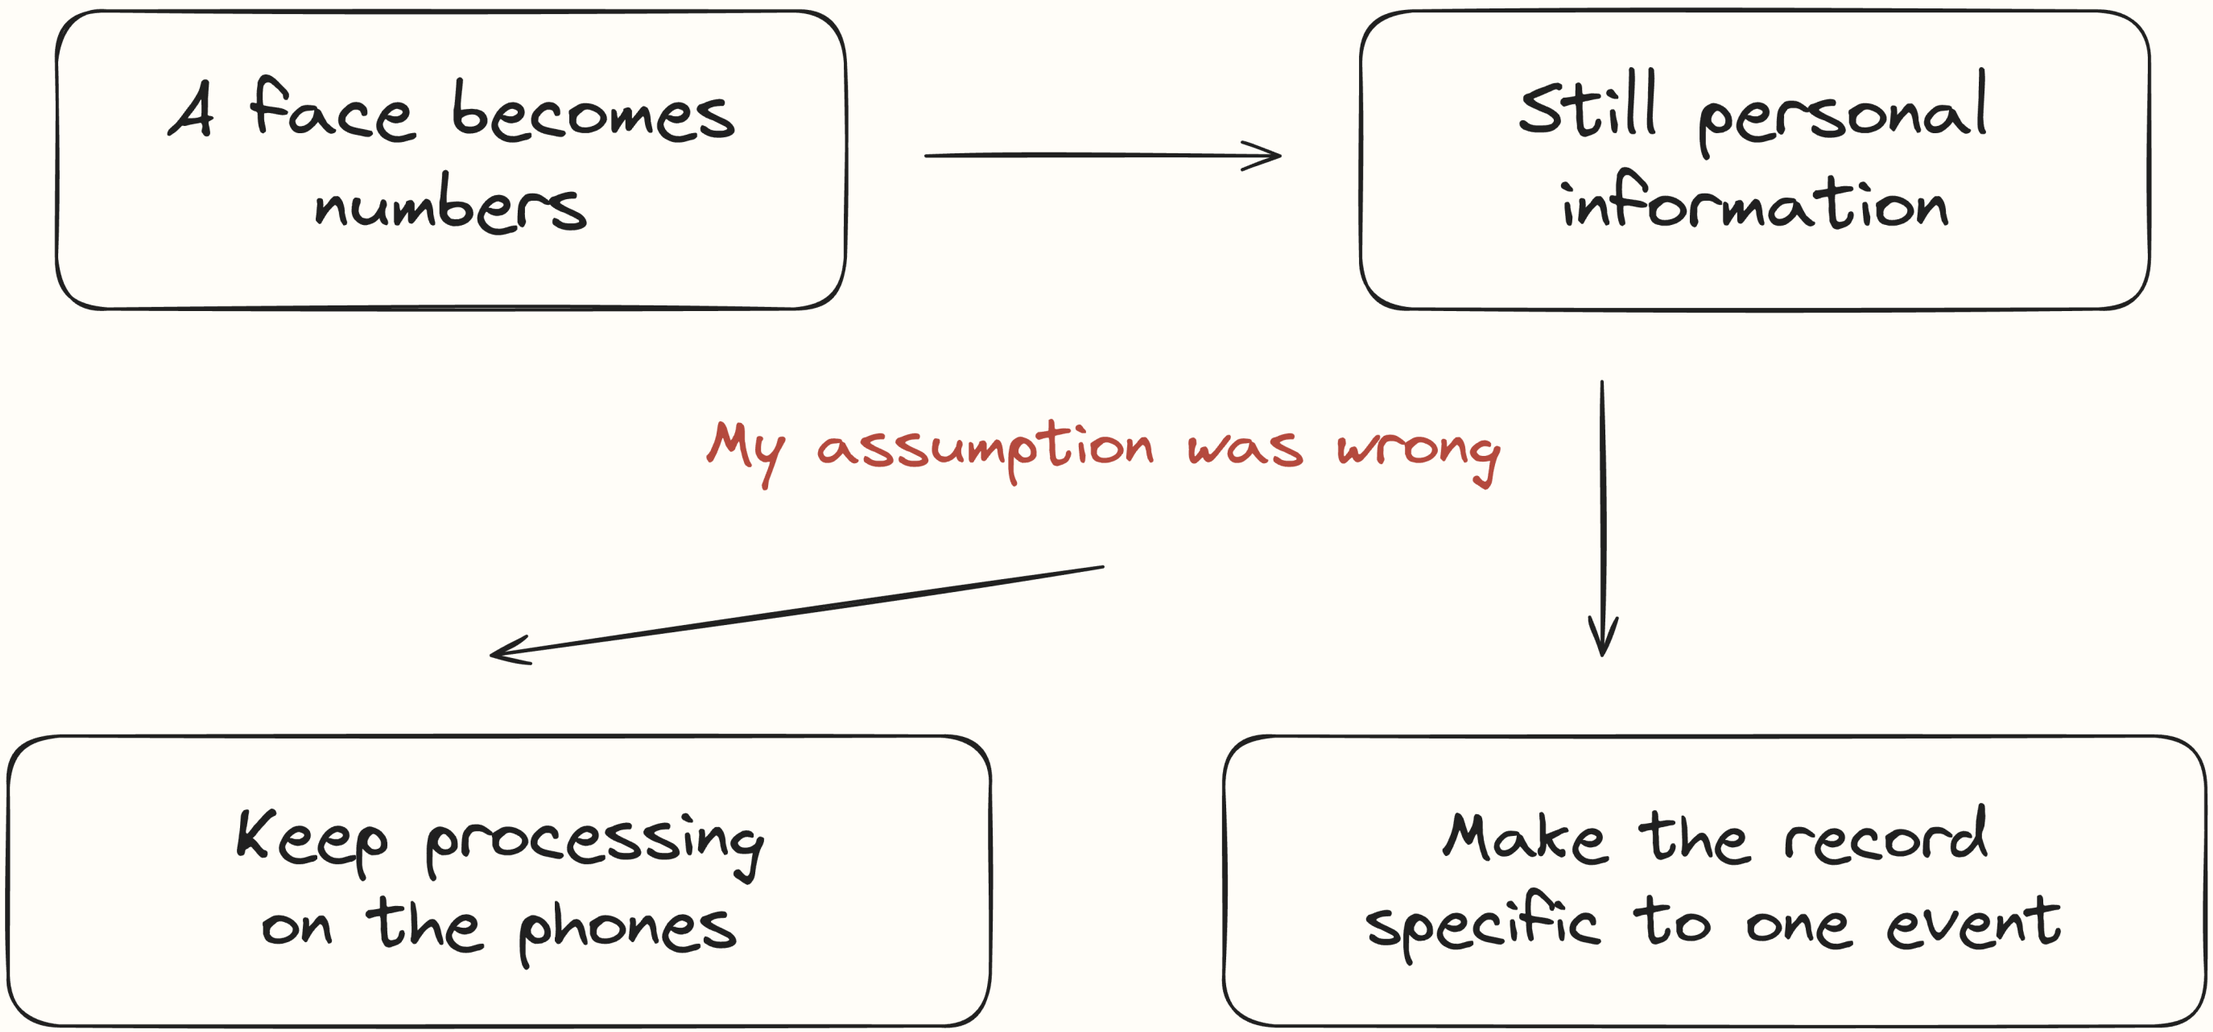

My scope

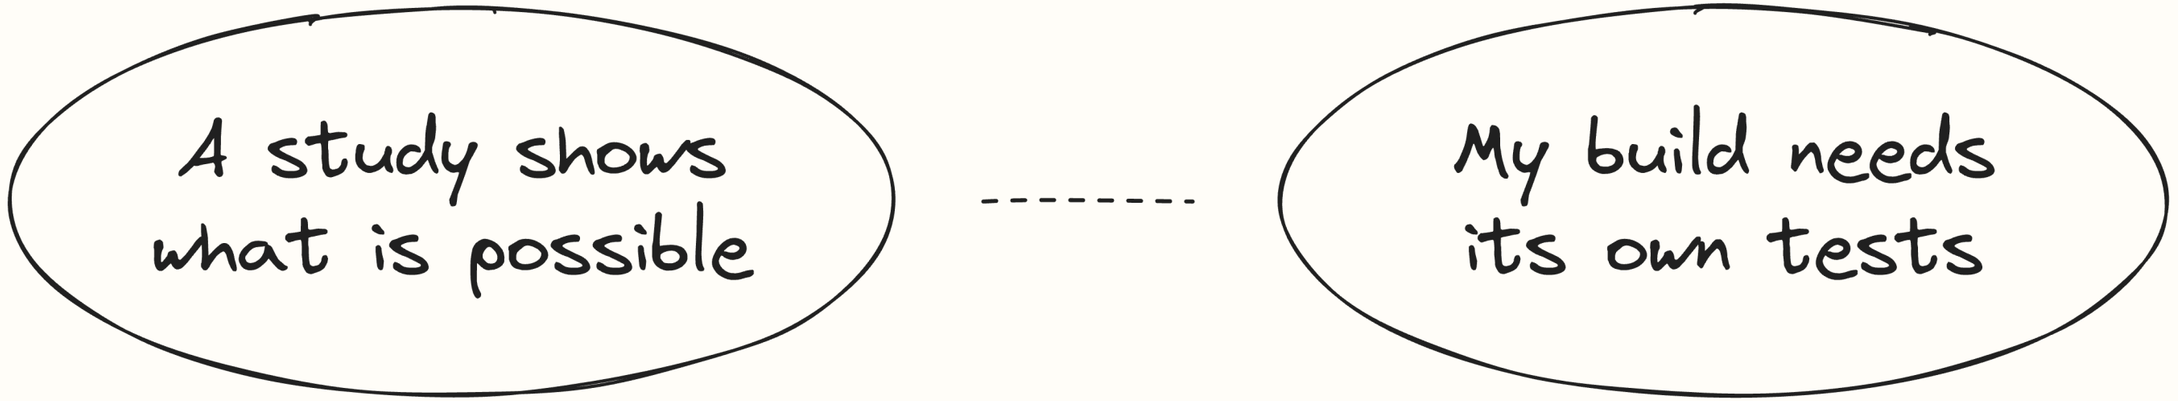

Too small

A face scan on its own

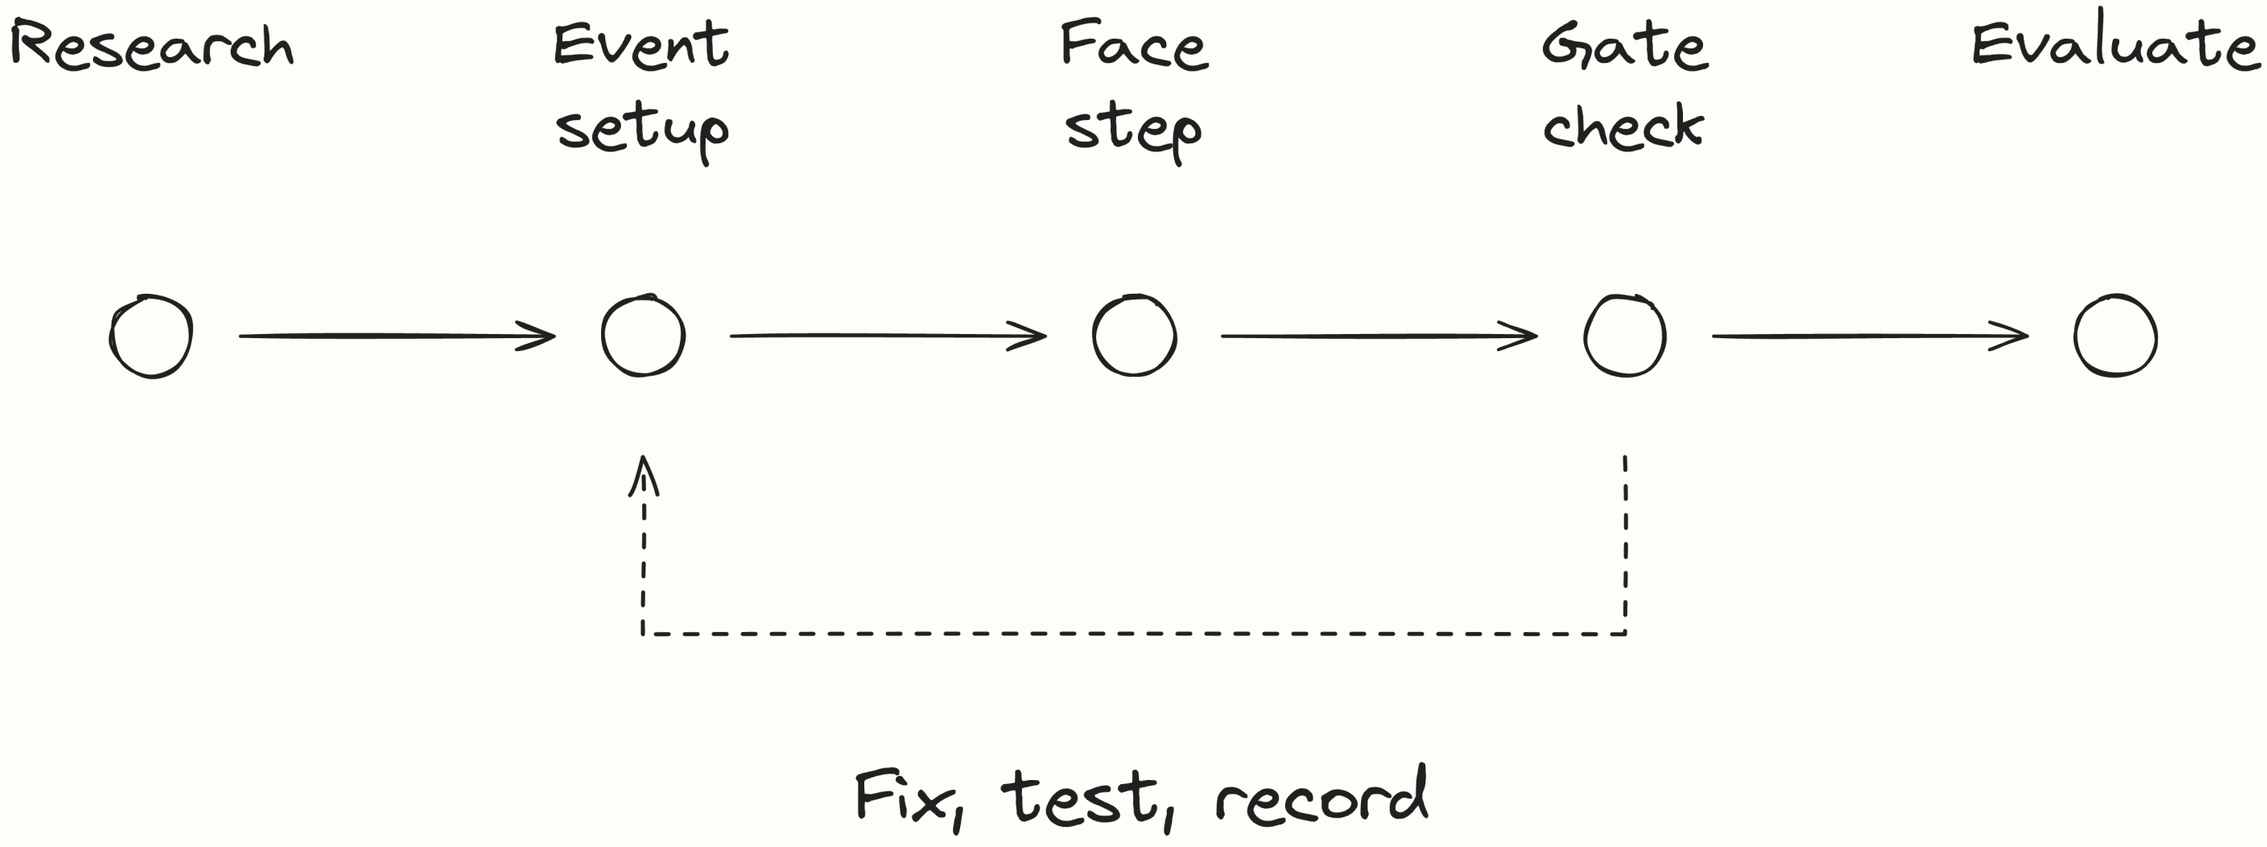

Can I build it?
Feasibility
Originality
What makes it different?
How will I prove it?
Evidence

A face becomes numbers
Still personal information
My assumption was wrong
Keep processing on the phones
Make the record specific to one event

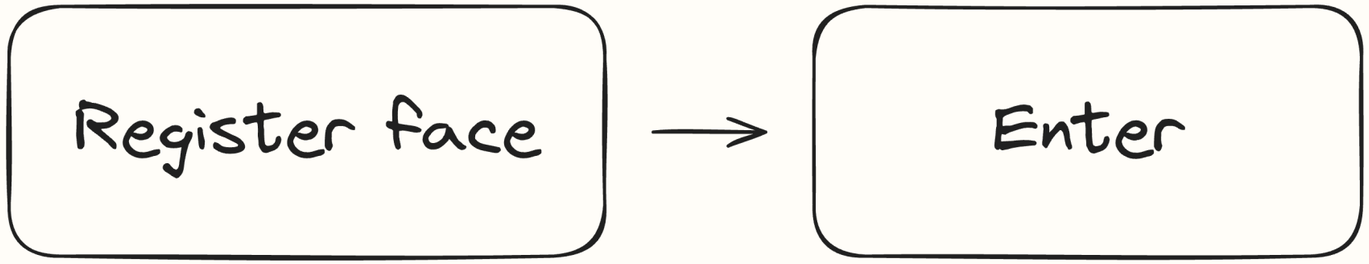

Different phones
Different people
Different conditions

I cannot borrow an accuracy claim

Research
Event setup
Face step
Gate check
Evaluate
Fix, test, record

My first version

After feedback

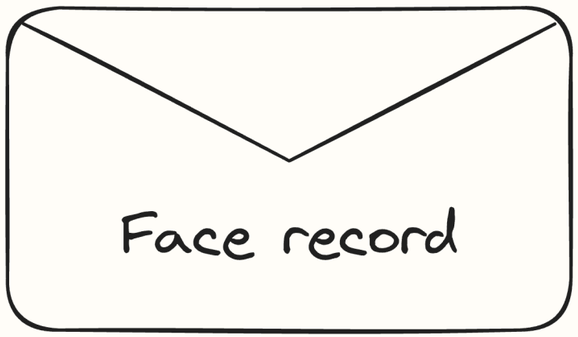

The missing beginning

Your phone

Event service

Gate phone

Check ticket
Seal pass

Open record
Compare face

Lock

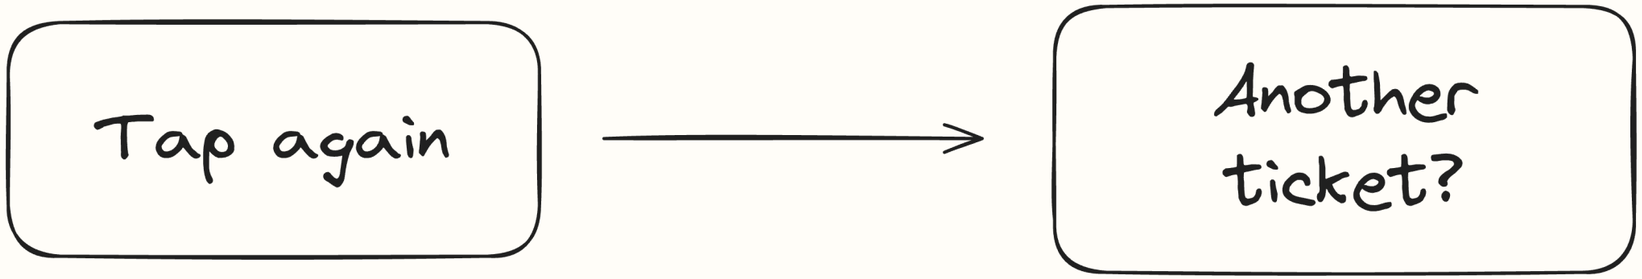

No reusable
face record here

Check locally

A sealed pass carries the protected record

If the reply is lost...

Risk

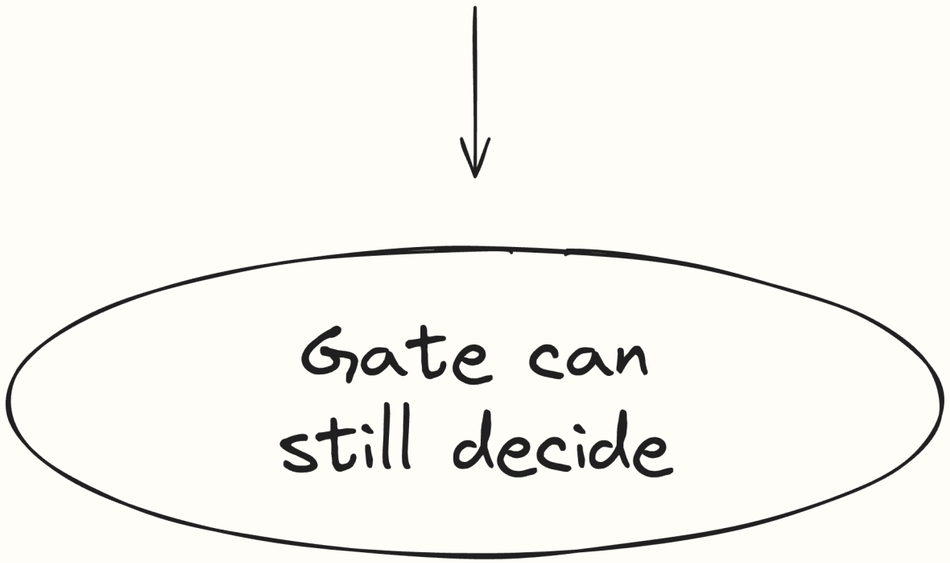

My fix

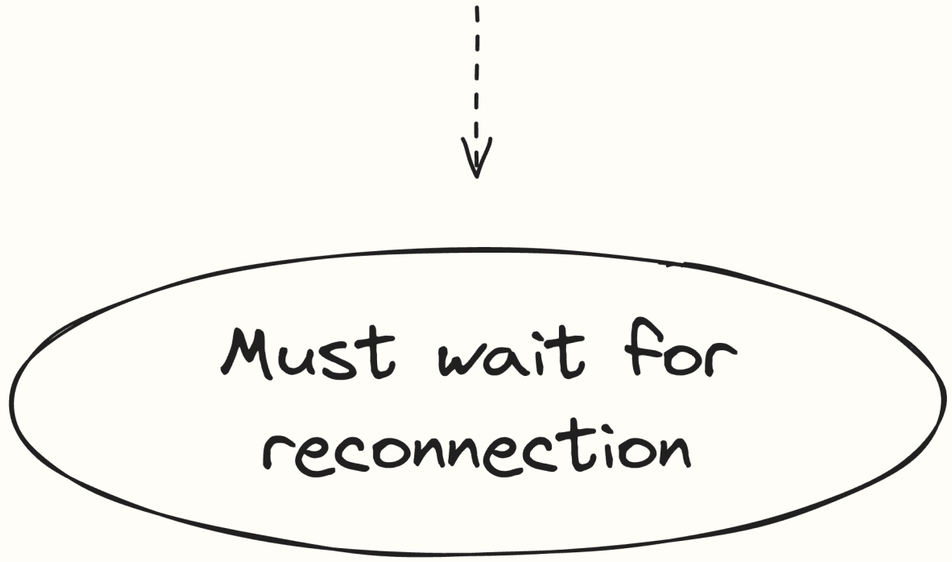

A lost reply must not create a second ticket

No Wi-Fi

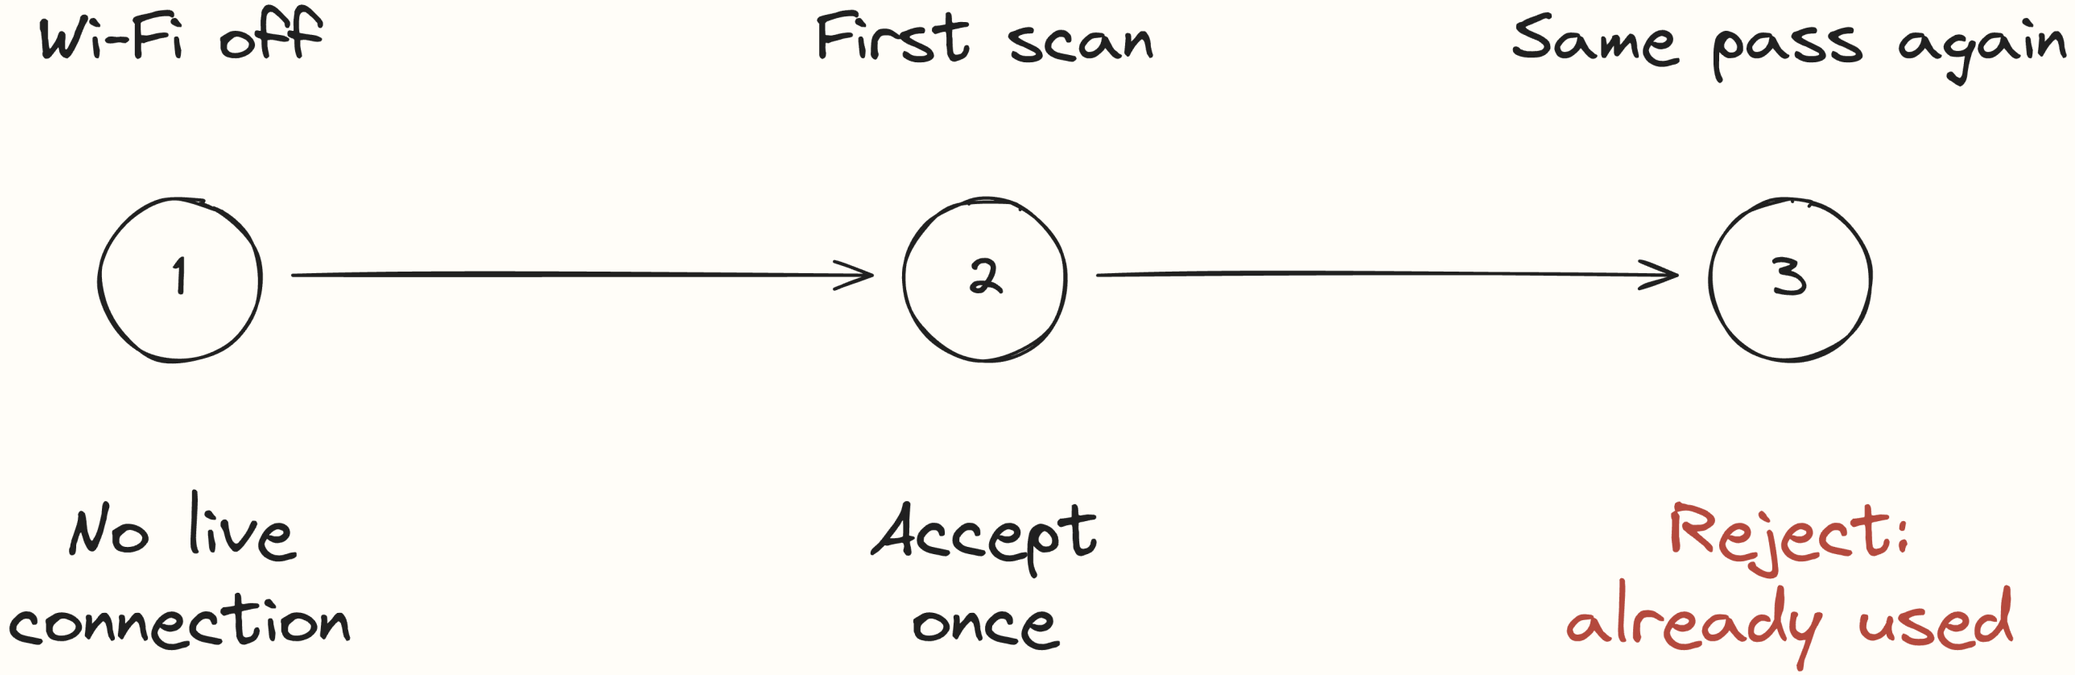

Entry continues

New cancellation

Updates wait

Expected demonstration

One prepared gate

Earlier software checks
Records retained

My complete journey
Reported successful

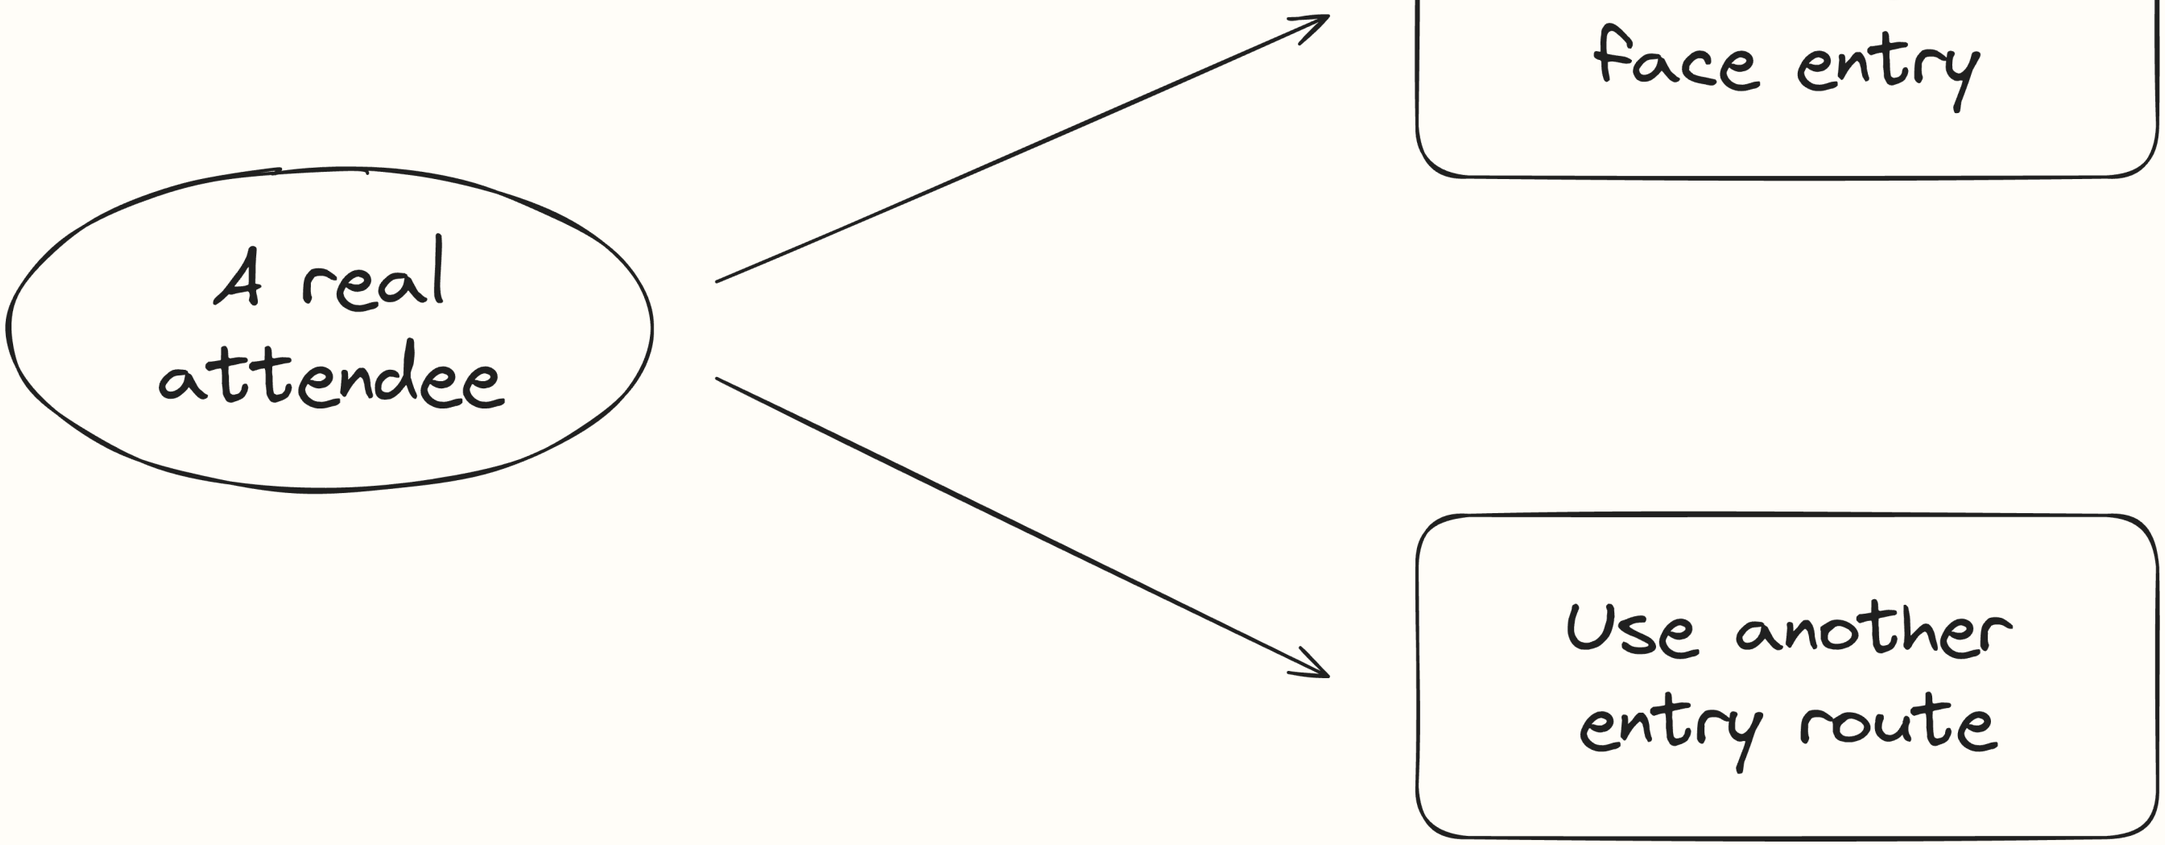

Traceable, but dated

Detailed receipt missing

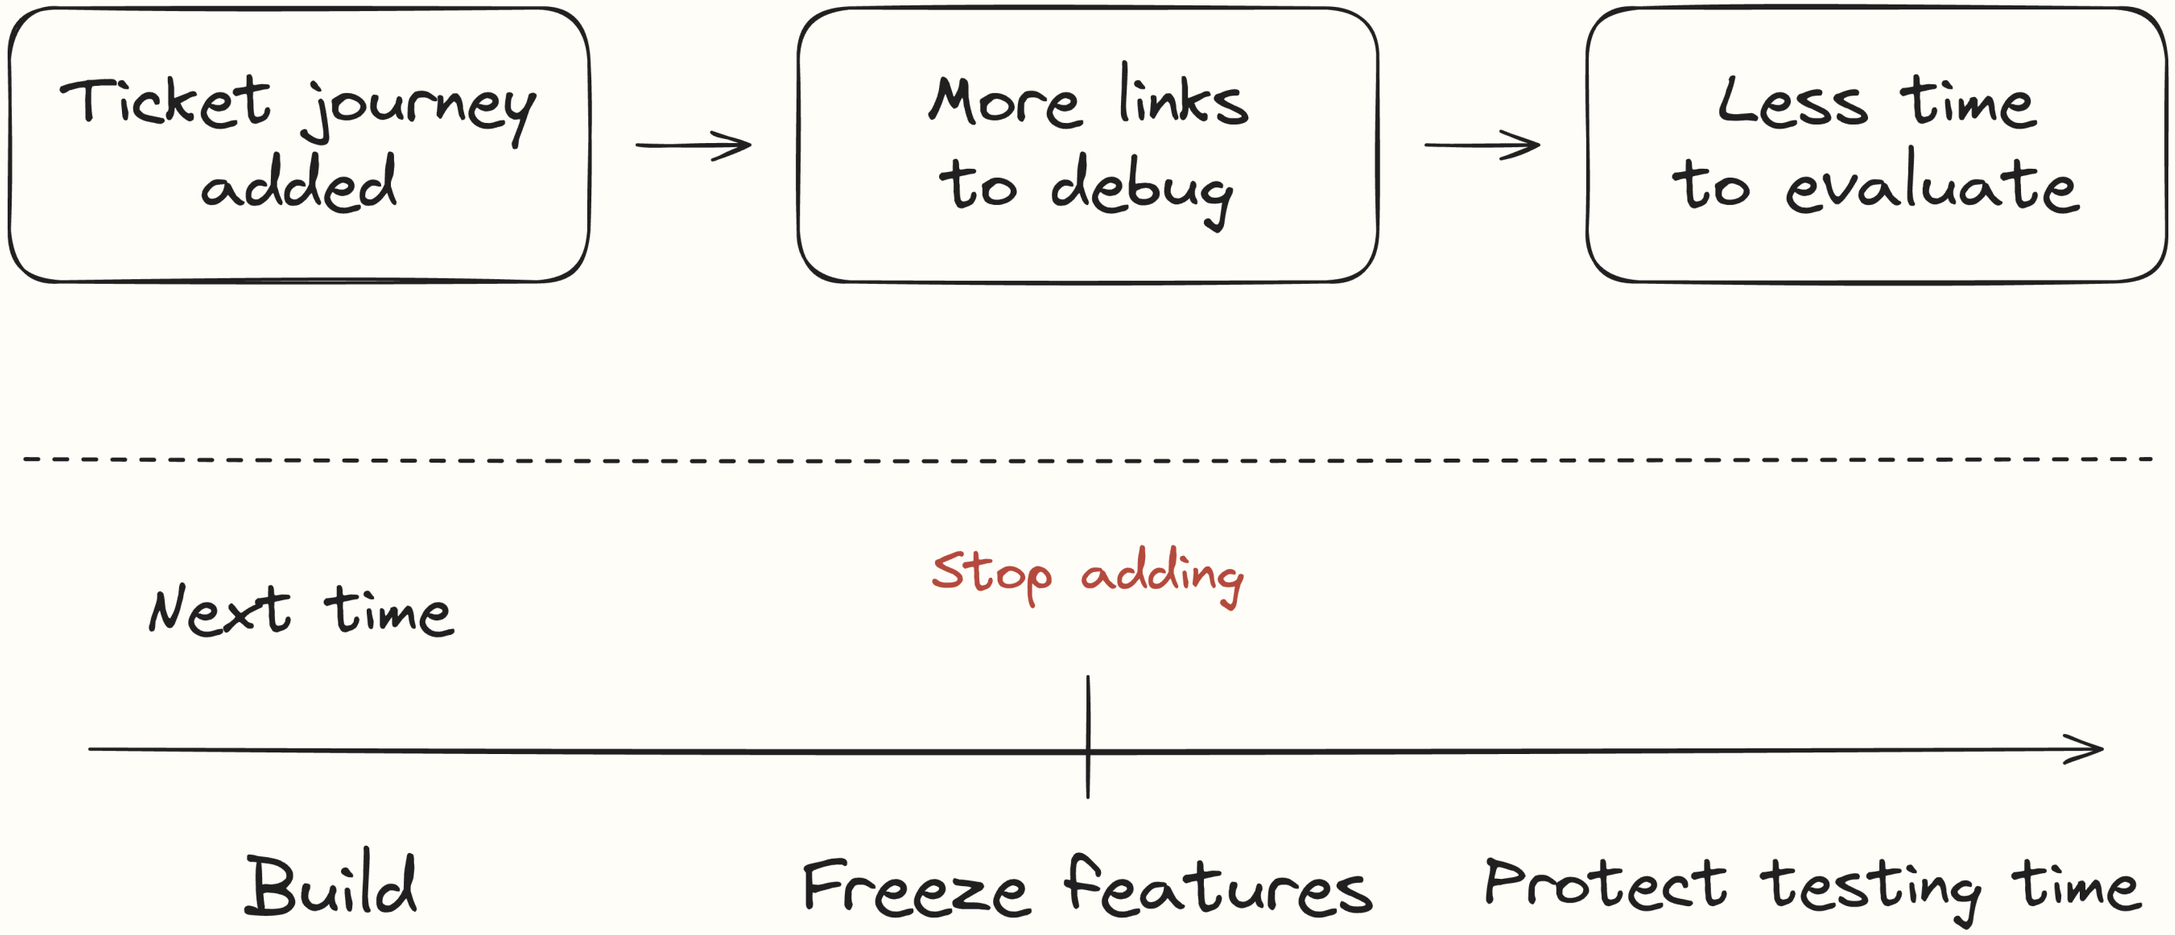

One successful run ≠ Reliable for everyone

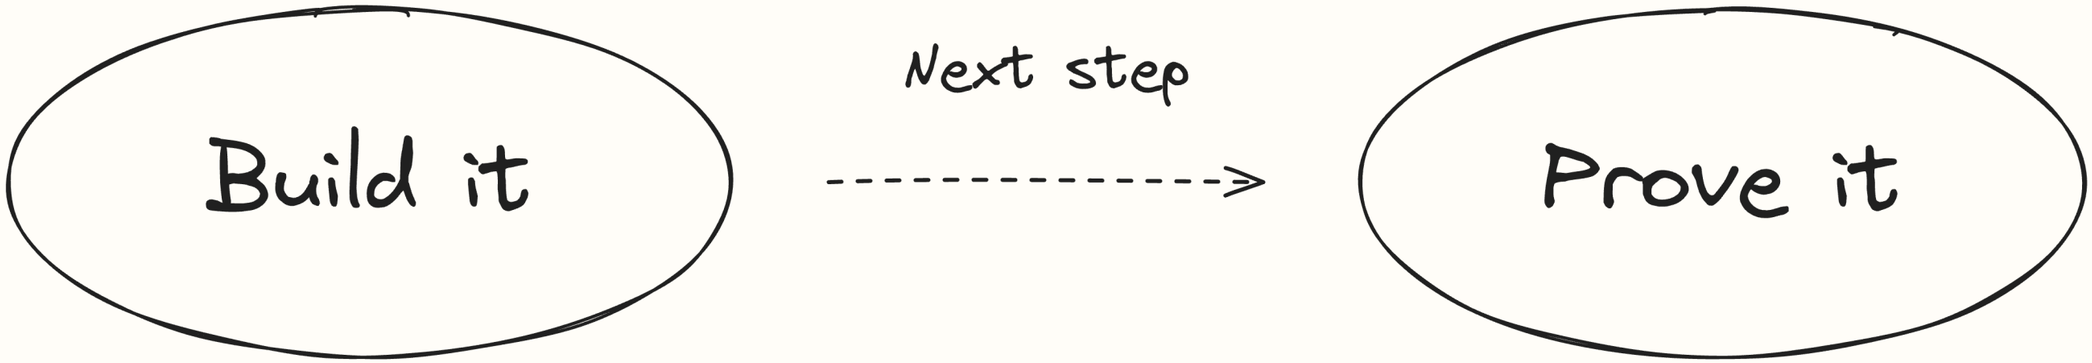

Connected event journey	→	Reported working
Less central face storage	→	Supported by design
Fast, accurate, trusted?	→	Not established

Choice must be real

Needed before real use

Ticket journey added
More links to debug
Less time to evaluate
Next time
Stop adding
Build
Freeze features
Protect testing time

Connected prototype
Less central face storage

Repeated trials
User feedback

Promising prototype. Public readiness unproven.
